A THOUGHT EXPERIMENT

Which of your systems went quiet?

Quiet and fine look exactly the same from the dashboard.

SWIPE →

THE LIST

Usual suspects

⏰ The cron job

Still scheduled. Points at a path you renamed.

📡 The uptime monitor

Still green. Watching a hostname that's gone.

🧪 The test file

Still there. Excluded by a glob someone tightened.

HOW YOU FIND OUT

Usually the day you **actually need it.**

0

Zero results reads as "no failures". It also reads as "nothing ran".

THE MORAL

What's the system you'd be most surprised to find has gone quiet?
