A BUILD STORY

One sentence. Event on sale.

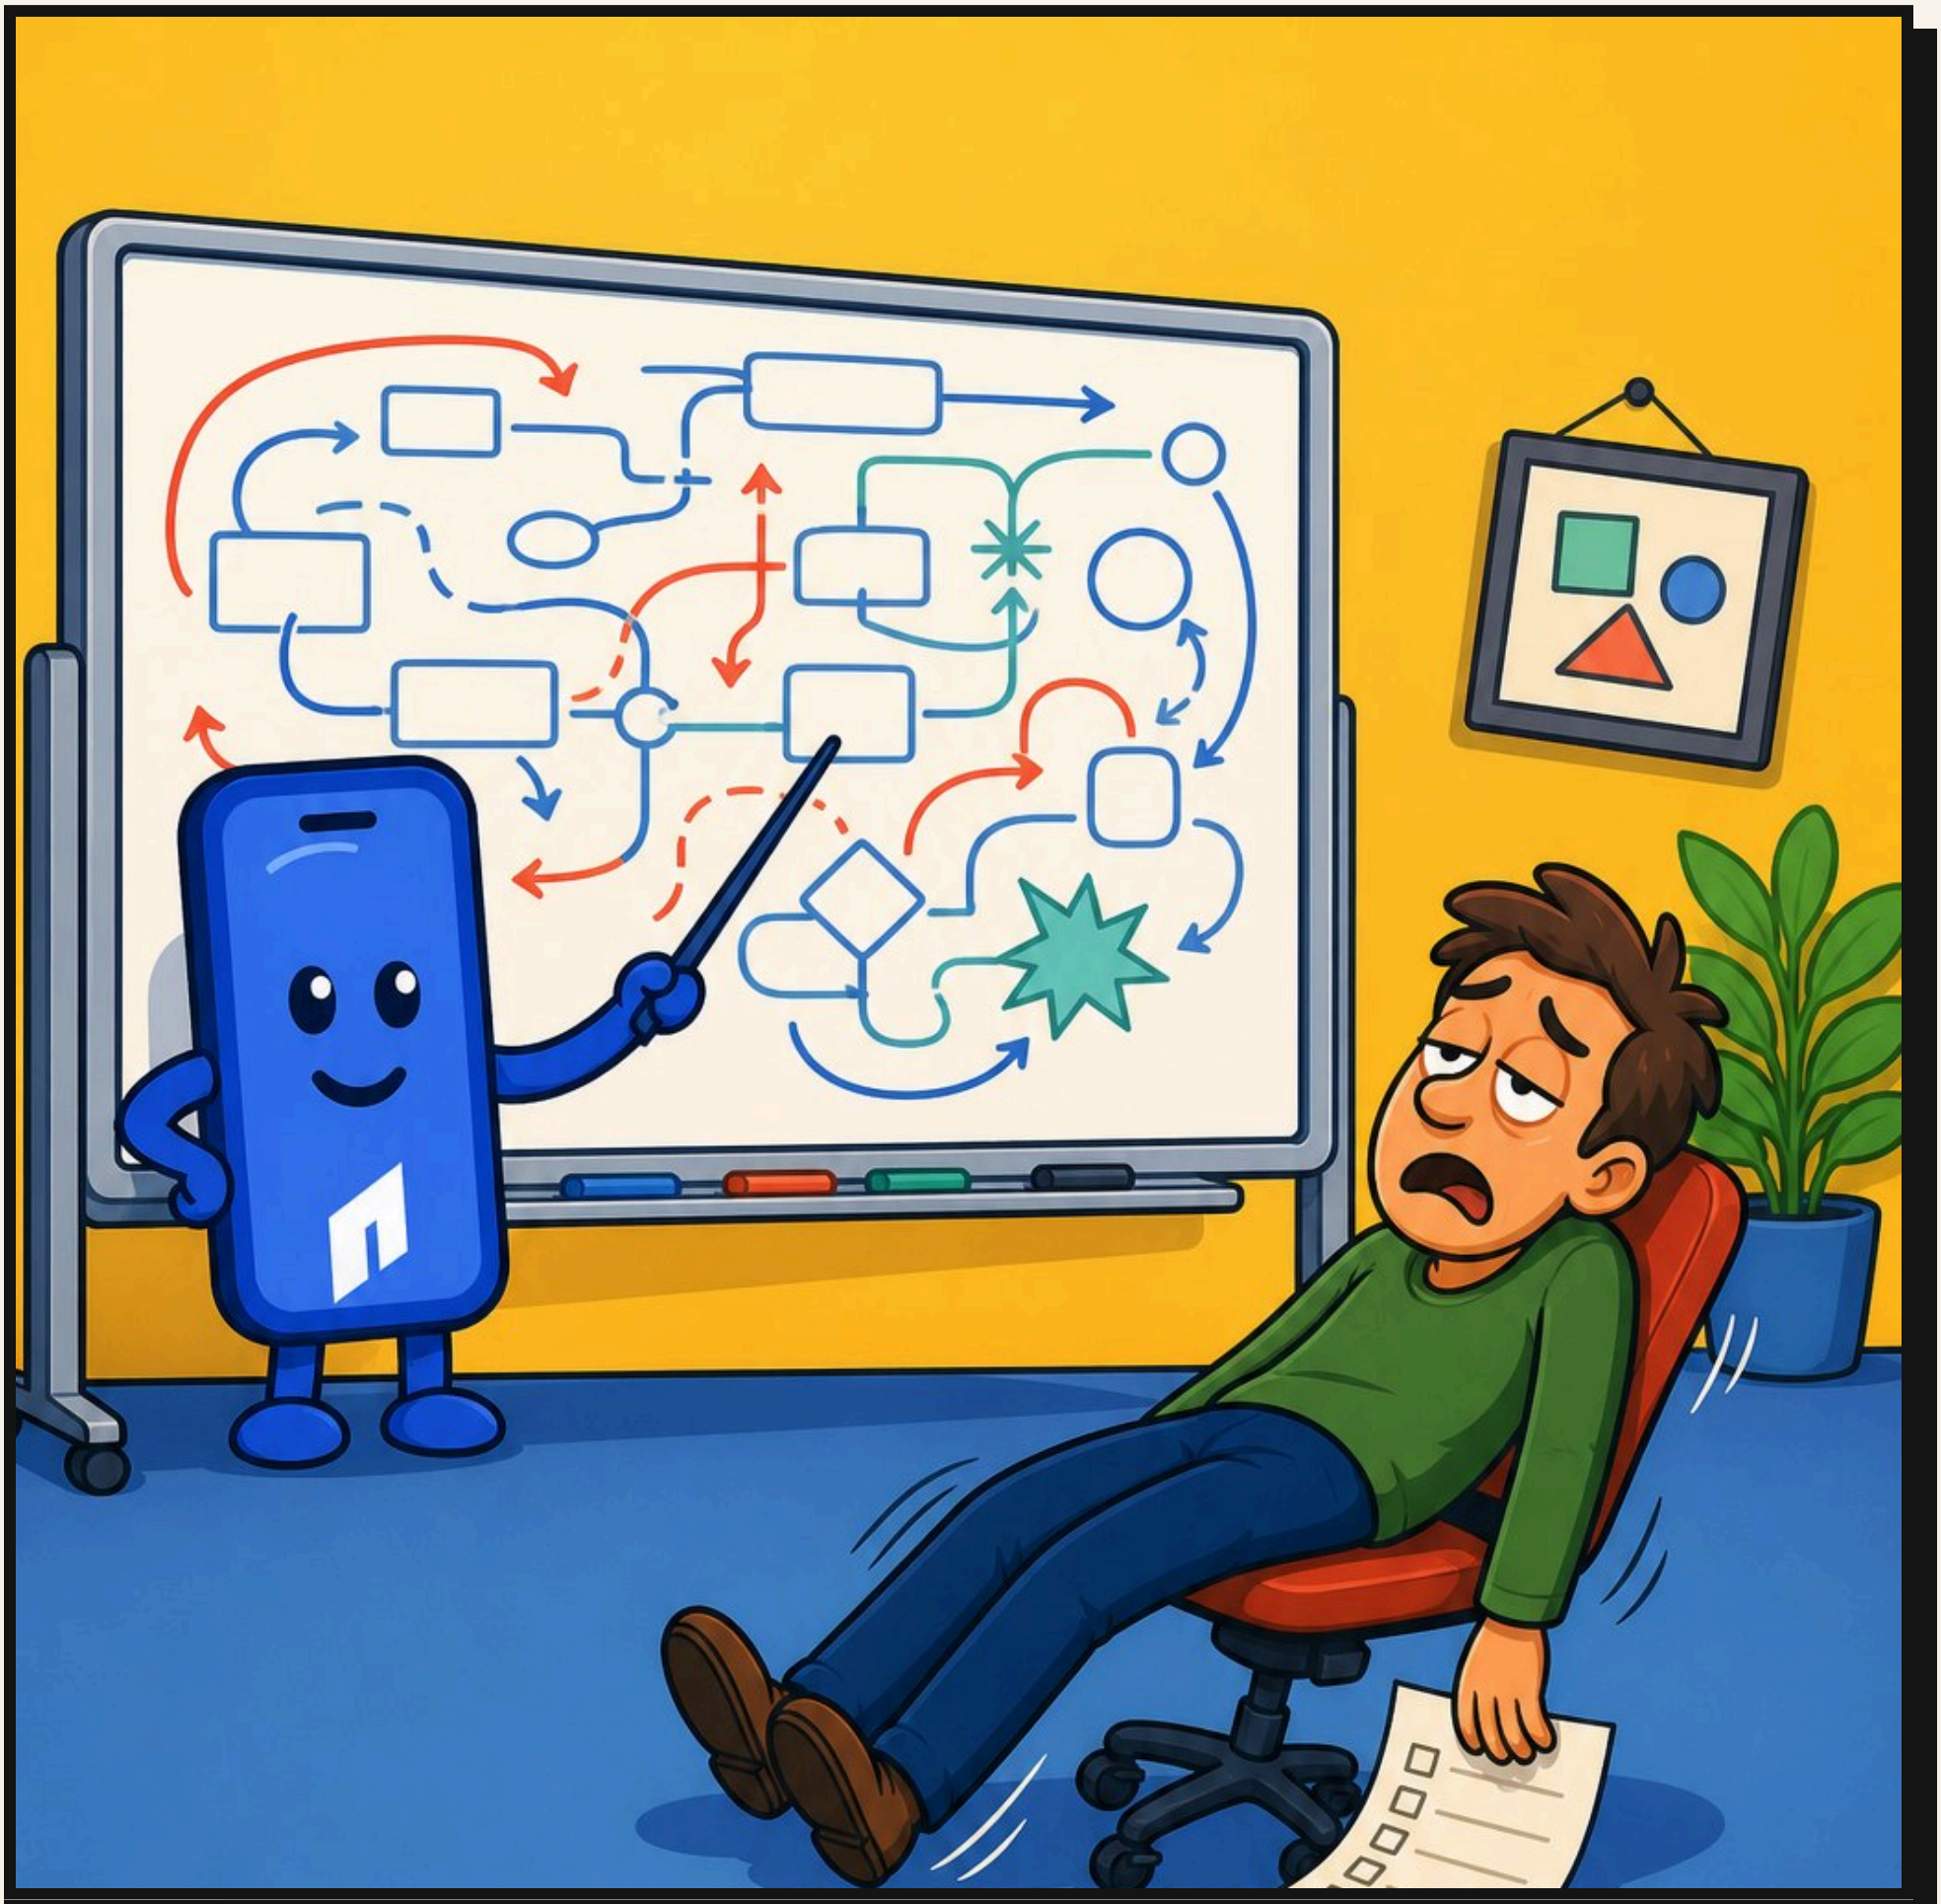

No new website to learn. Just one app added to the AI.

SWIPE →

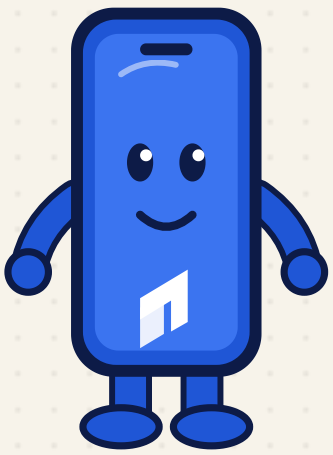

WITHOUT THE APP

The AI can only explain how **you** might do it yourself.

THE LIST

With an events MCP app

You say it once

"Set up our October networking night, 80 places, £15 a ticket."

It asks what it doesn't know

No guessing the details.

It reads the price back

So you catch the typo, not your guests.

On sale only when you say yes

Nothing goes public on a guess.

THE BIT THAT MATTERS

It waits for your yes. Then the tickets go on sale.

THE MORAL

Without the app, your AI explains the job. With it, your AI does the job.

💾 Save this for the next "what's an MCP app?"
