MCP, BEFORE YOU CONNECT

Four checks before an AI gets a key

THE LIST

The four checks

👀 Read or write?

Start read-only if it exists

🔑 Where does the token go?

Redirects count

📄 What can it change?

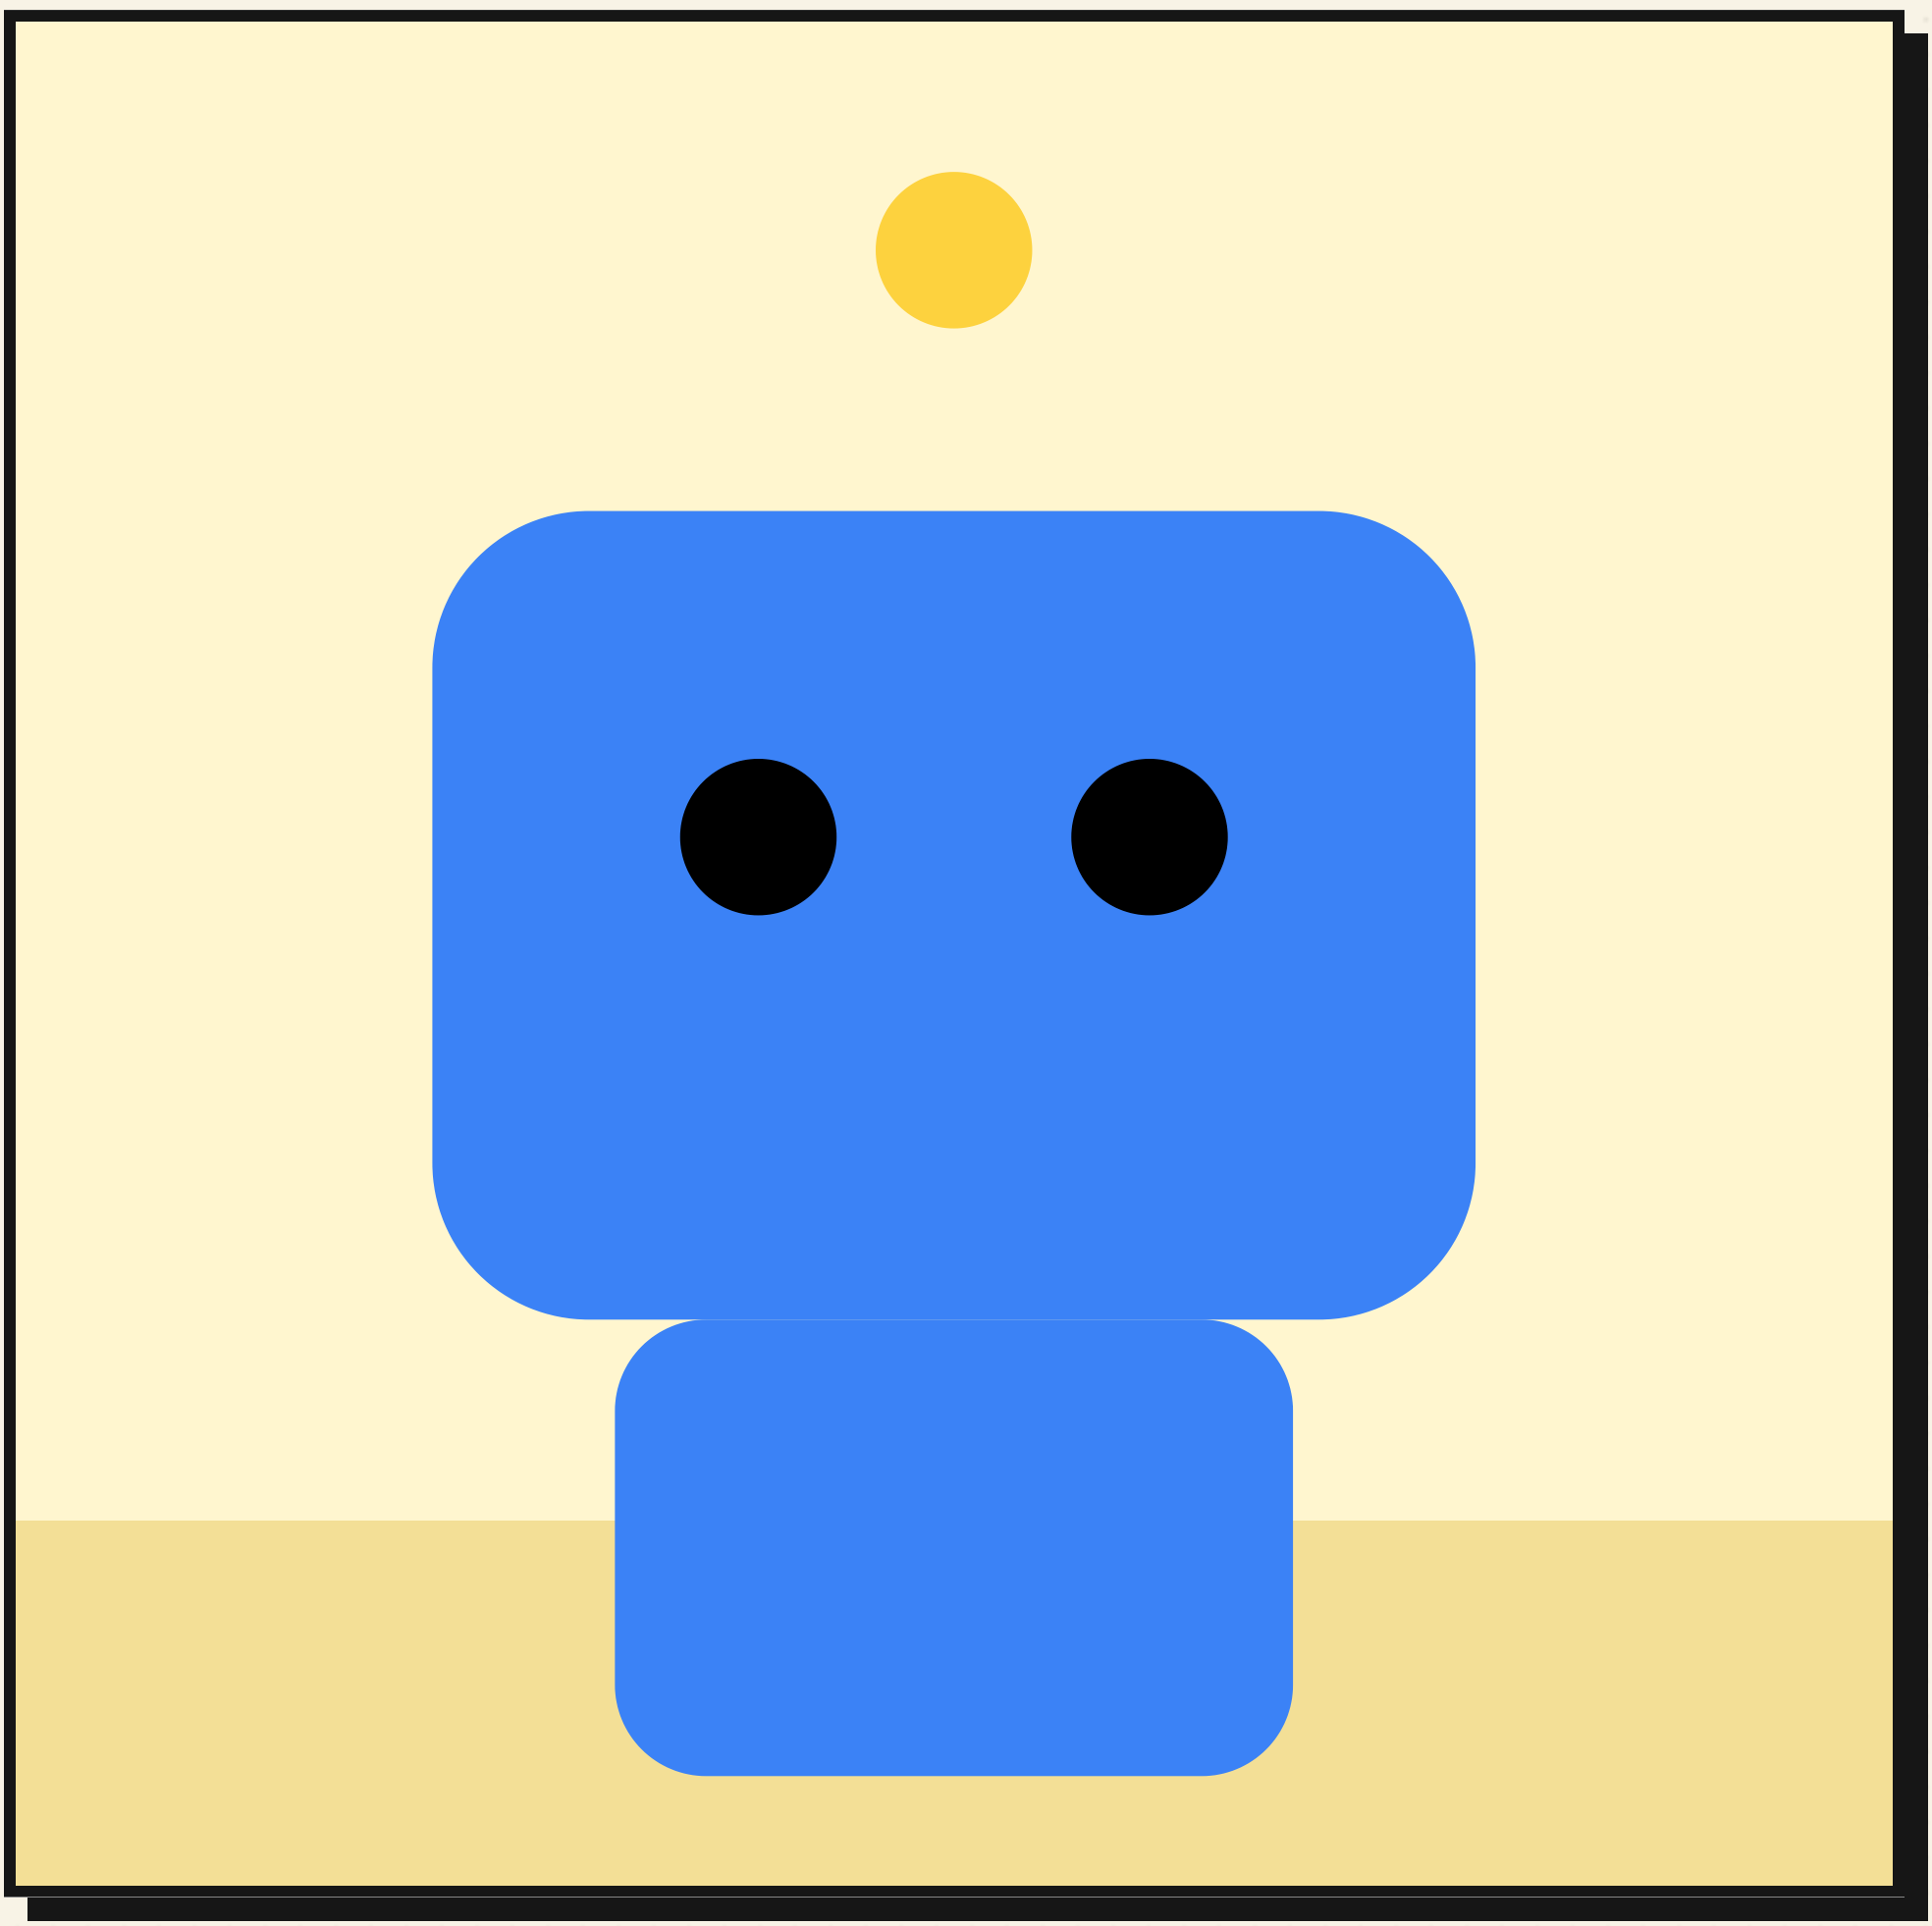

List actions, not brand names

🧯 Who switches it off?

Know before you need it

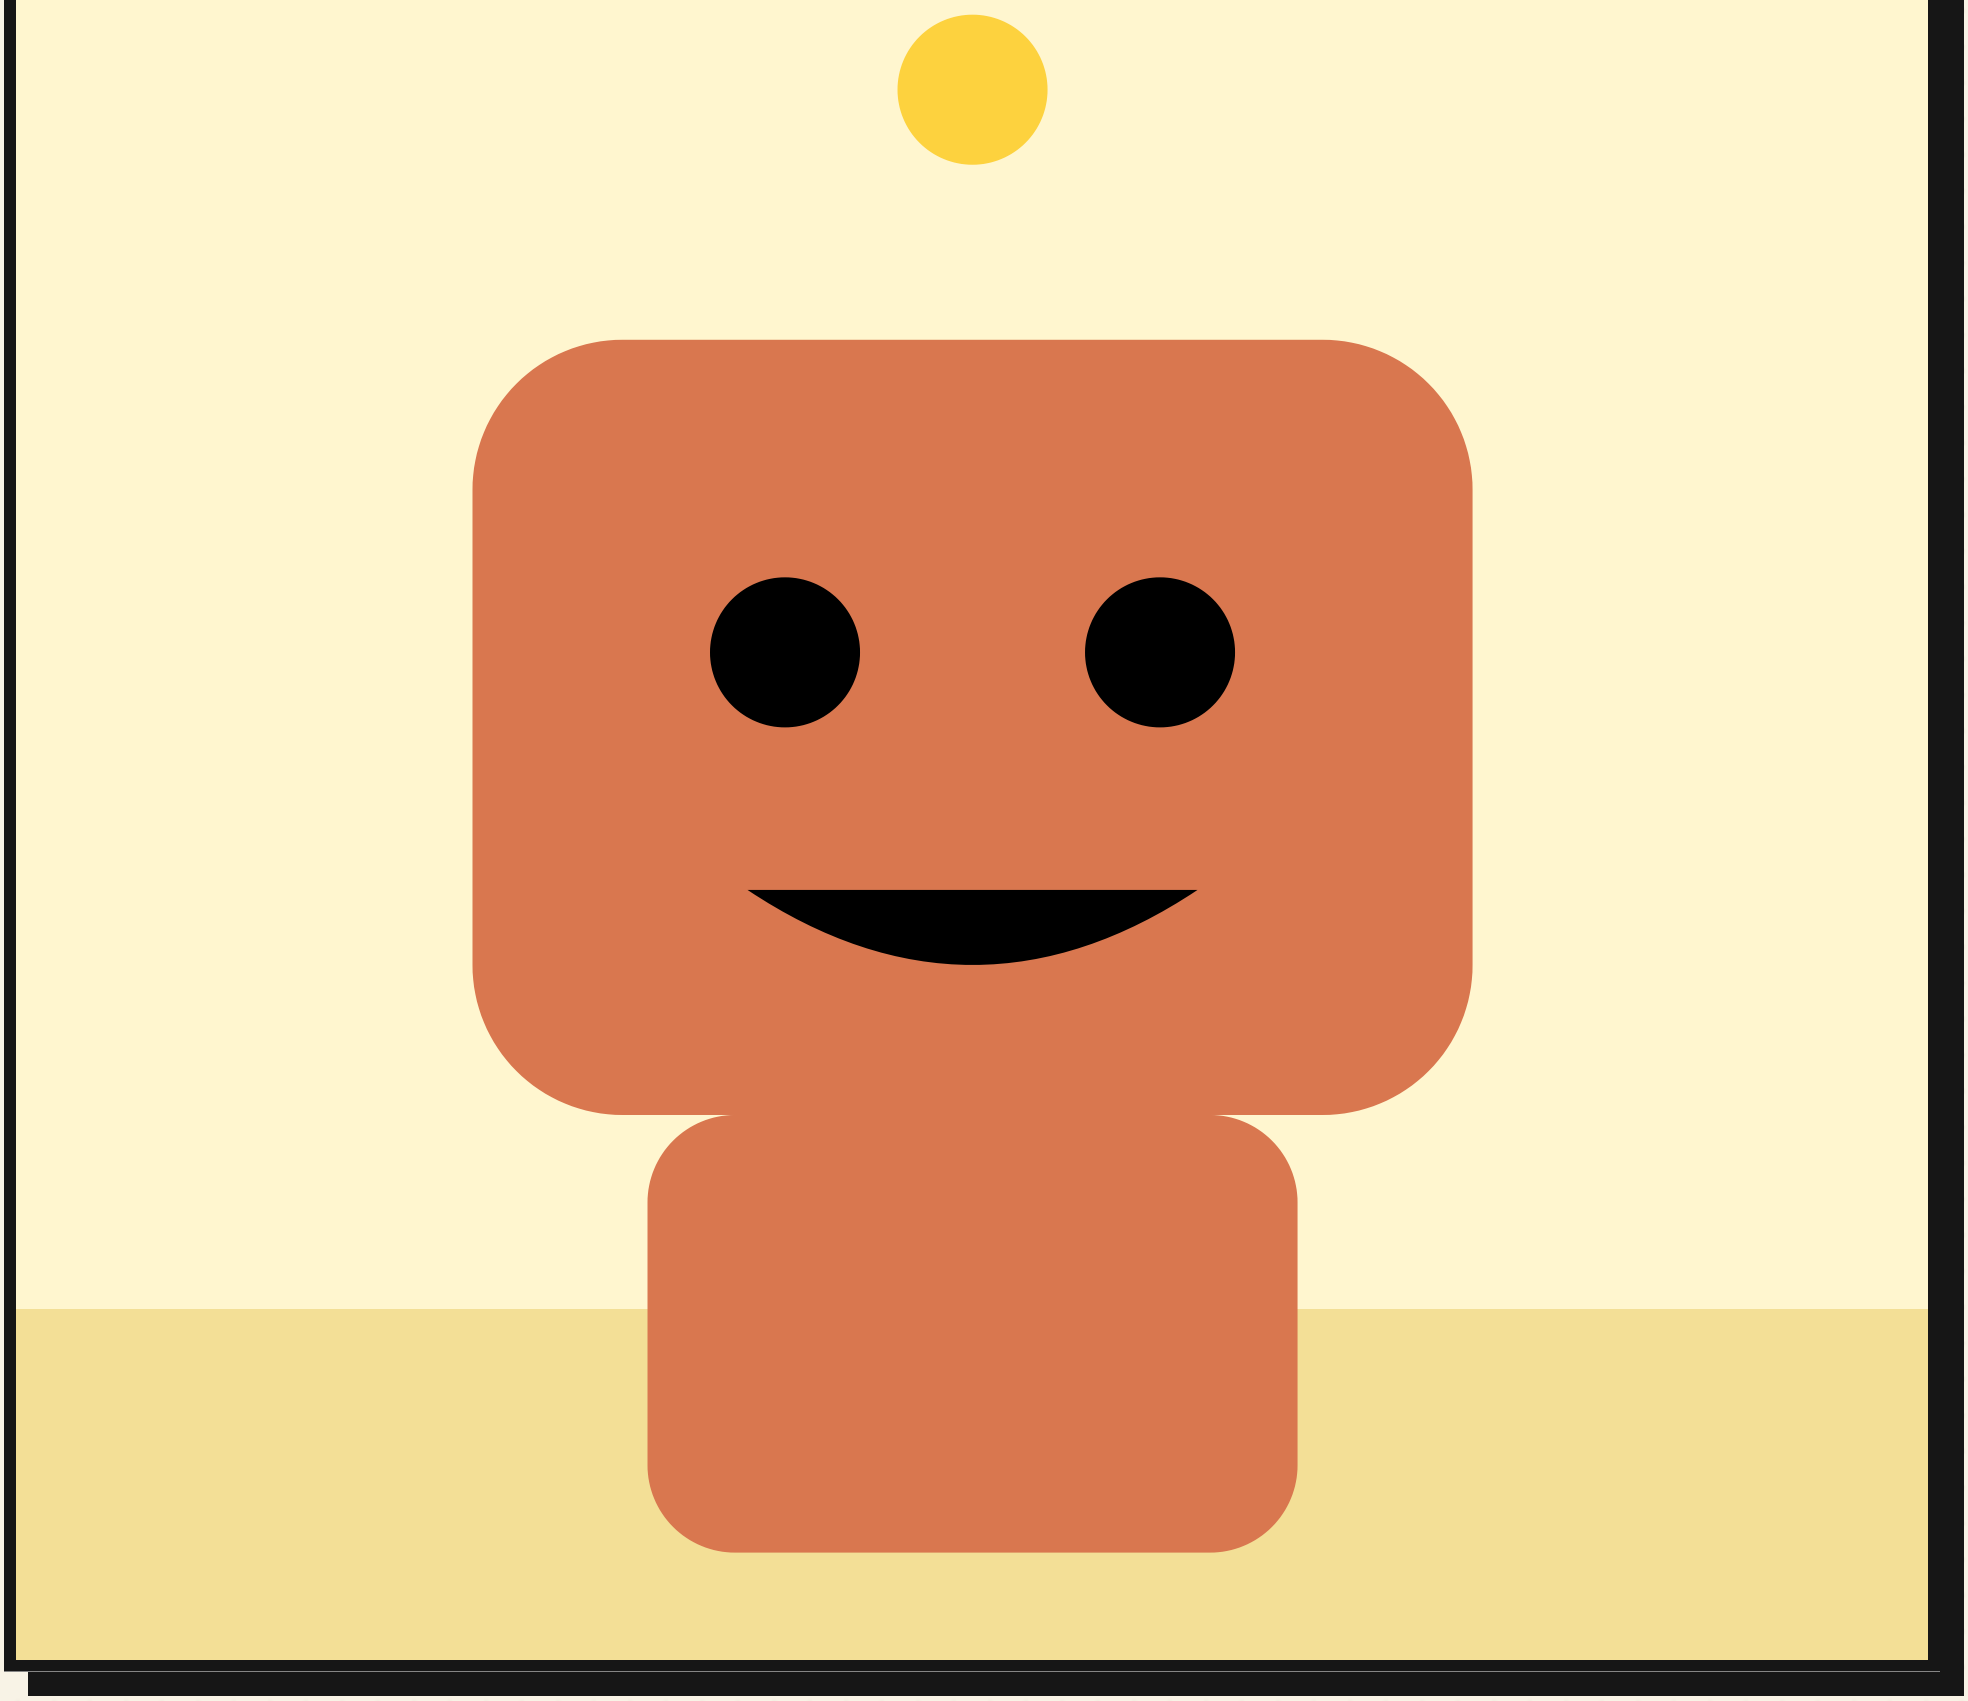

CHECK 1

If it can write, I want the list of what it can write.

CHECK 2, A REAL ONE

A sign-in redirect once sent refresh tokens elsewhere. Claude Code fixed it on 09/11/2026.

THE MORAL

Connect it like you will have to undo it.

💾 Save this before your next connector
